

10 GOLDEN RULES WATER MEDICATION

EVERY DROP PERFECTLY BALANCED

1 Check the water system

Install a well designed drinking water system, with a separate line for medicated water and make sure it is properly maintained.

2 Calibrate the dosing pump

Calibrate the dosing pump at least once a year.

3 Test the water quality

Monitor water quality at least twice a year at the start of the pipe and where the animals drink (scan QR code for a video on sampling).

4 Choose the right product

Choose the right product that: dissolves well, is stable for at least 12 hours and does not contain lactose.

5 Use the SoluStab calculator

Visit calculator.solustab.eu to calculate the correct dose based on bodyweight and water intake.

6 Wear gloves and a mask

Wear gloves and a mask when handling medicine.

7 Prepare the stock solution

Use a clean bucket. Mix the calculated quantities of product and lukewarm tap water to prepare a solution for maximum 24h. Close the stock solution bucket.

8 Monitor the animals

Monitor health and water consumption of the animals during the treatment. Contact your veterinarian if recovery is not as expected.

9 Clean the system

Clean and flush the pipes after medication. Don't forget to clean the materials as well, especially the stock solution vessel.

10 Do not mix

Do not mix different products (medication, vitamins, acids etc.) unless the supplier states this is possible.
